A little practice. A deeper connection.

Pronunciation first. Engagement and understanding by design.

Make children want to return

Choose Prem Singh or Sehaj Kaur, then follow 38 Japji Sahib pauris across six regions. Stars mark mastery; Nanak coins unlock clothing, belongings and character actions. Rewards follow learning, not screen time.

Help each practice mean more

Pronunciation is the primary focus. Gurmukhi, Roman-letter Punjabi and reference audio support recitation. English meaning and connected imagery invite children to explore the shabad beyond saying its words.

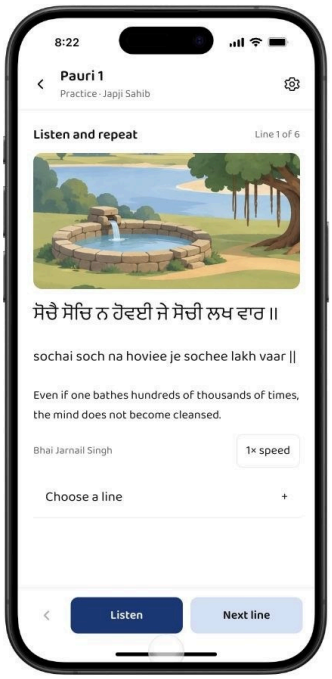

Two modes.
One path toward mastery.

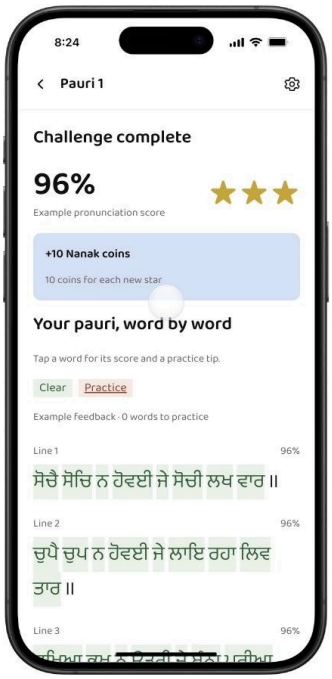

1. Practice at your pace

Listen to the reference. Follow the pronunciation aid. Repeat a line or focus on a difficult word before the full recitation.

2. Take the pauri challenge

Recite in one continuous recording. Review word-level feedback, listen side by side and return to the line that needs practice.

Why a memory palace?

Preview the whole panorama, then return to a familiar landmark with each line. Connected scenes are intended to support recall and reflection. Our journey draws inspiration from Sikh history and the passage of time, while pronunciation remains the learning goal.

One focused Kids Mode. Built for Sundar Gutka.

Designed around Sundar Gutka's audio, text, settings and state. JavaScript and React Native patterns keep the handoff familiar and the integration focused. The scoring design compares a completed recording with the chosen reciter, then identifies words to revisit. The ustaad sets the standard.
