Uchaaran

A playful path to confident Gurbani pronunciation

Partner: Khalis Foundation | Team and members: to confirm

Selected problem: Help children build a lasting Gurbani practice through pronunciation support and meaningful progress.

The problem, in our words

Children learning Gurbani can struggle to read Gurmukhi and know whether they are pronouncing a line correctly. Parents want to help, but may not have time or access to an ustaad for everyday practice.

What we built

A working browser prototype inspired by Sundar Gutka: 38 Japji Sahib pauris across six map regions, guided practice, challenge results and character rewards. Audio and saved progress work; pronunciation scores and coaching are simulated.

Who uses it and how it helps

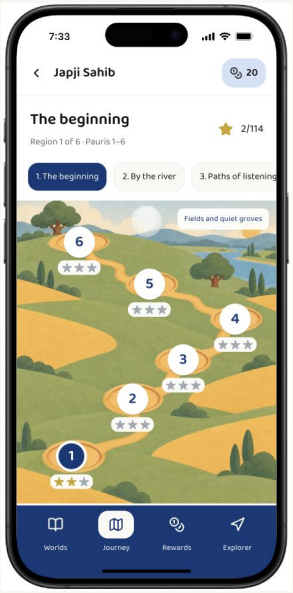

For children in grades 6 to 8, with parent support.

Choose a path. Pick Prem Singh or Sehaj Kaur. Open a pauri on the map and preview its connected visual story.

Practice with support. Read Gurmukhi, Roman-letter Punjabi and English meaning. Listen to reference audio; revisit difficult lines.

See progress. Review word-level feedback. Earn stars and Nanak coins for clothing, belongings and character actions.

For Khalis Foundation, this tests a learning journey within Sundar Gutka. Success means children return and improve against an ustaad-reviewed standard.

Tech tools we used

JavaScript, React Native Web and Vite; BaniDB text and Khalis audio; Codex, Paper, ChatGPT Sites and AI-generated illustrations.

Next steps and asks

Proposed: test with children, review content with an ustaad and connect voice-following. Ask: reviewers and test families. Final-submission scope needs team confirmation.

Working with the nonprofit

Project discussions shaped the focus on pronunciation, familiar book characters and rewards tied to mastery. Next, confirm the content-review process with Khalis Foundation.

Hackathon feedback

Team input pending: what worked well during Build Day and one change that would help the team finish.
