Uchaaran

A Gurbani learning journey children can return to.

Make the next line approachable

Children need help reading Gurmukhi, hearing correct pronunciation and knowing what to practice next. Parents may lack time or daily access to an ustaad.

We built a playable path through Japji Sahib: 38 pauris across six regions, with guided practice and character rewards inspired by Sundar Gutka.

A simple loop, with a purpose

Explore

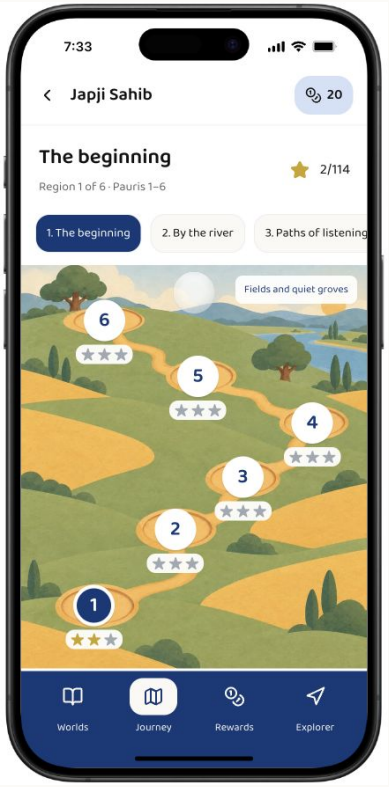

Choose Prem Singh or Sehaj Kaur. Open a pauri and preview its connected visual story.

Practice

Read Gurmukhi, Roman-letter Punjabi and English meaning alongside reference audio.

Build mastery

Review the challenge scorecard, revisit words and earn stars. Nanak coins unlock clothing, belongings and character actions.

The working journey map

What works today

Practice audio, the full journey, rewards and saved browser progress work. Challenge scores and word coaching are simulated. Live speech-following and pronunciation assessment still need backend integration.

Useful to Khalis Foundation now

Test the learning flow with children and parents before native integration. Familiar book characters and paath audio connect the experience to existing community resources.

Built for the next team to carry on

JavaScript/JSX, React Native Web screens, assets and integration notes support the handoff. Next: connect recitation tracking and validate scoring with an ustaad.

How the design evolved

We explored journey maps and reward concepts in Paper, then built a playable prototype. Iteration led to calmer imagery, connected visual stories and character rewards tied to mastery.
