Uchaaran

Pronunciation first. A journey into Gurbani.

Help children say it, then connect with it.

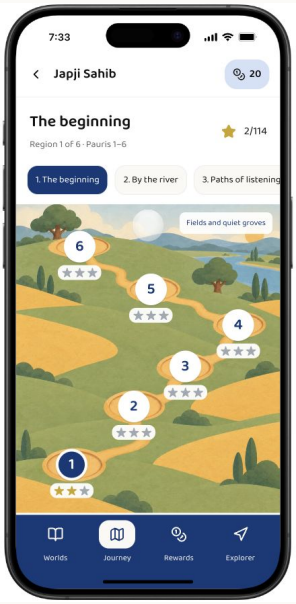

Learning Gurbani asks children to navigate unfamiliar script, sounds and meaning. Uchaaran pairs pronunciation practice with a playful journey, so families have a clear path for learning together.

Engagement that serves learning

A map of 38 Japji Sahib pauris across six regions gives children a visible path. Prem Singh and Sehaj Kaur make it personal; stars and Nanak coins turn mastery into clothing, belongings and character actions.

Understanding alongside pronunciation

Gurmukhi, Roman-letter Punjabi and English meaning sit beside reference audio. Children can listen, recite and revisit a word while exploring the meaning of the shabad. Pronunciation stays the primary goal.

Explore · Practice · Grow

Why a memory palace?

A connected panorama gives each passage a place and each line a familiar landmark. Returning to that place is intended to support recall and reflection. Inspired by the idea of a journey through time and Sikh history, we chose calm, connected scenes over unrelated illustrations.

From recitation to a useful next step

Scoring pipeline design

Record a pauri → **Align and compare** → **Review and retry**

One continuous recitation → ML + the chosen reciter → Word feedback + audio

Designed to fit Sundar Gutka

JavaScript and React Native patterns make the experience easier to carry forward. The native design reuses Sundar Gutka audio, text, settings and state, with Kids Mode isolated for small integration PRs. The ustaad sets the standard; ML helps identify what to practice.
