The problem: helping children learn Gurbani

Children need pronunciation support and a reason to practice. Conversations with Khalis Foundation focused us on engagement and understanding: help children return, recite with care, and explore what the words mean.

Two modes. One path toward mastery.

1. Practice at your pace

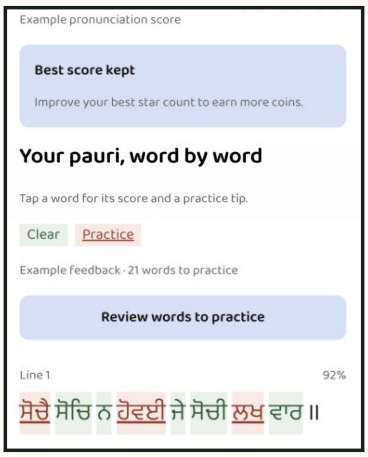

Listen and recall with Gurmukhi, Roman-letter Punjabi and English meaning. Revisit a line or word.

2. Take the pauri challenge

Recite a line and tap Done. Review word feedback. Earn stars and Nanak coins for character rewards.

Listen + recall

Review each word

What changed since midterm

Organizers asked for more attainable goals and simpler feedback for students. We added line-by-line scoring, short prompts, and an ML maintenance guide for Khalis Foundation.

Why a memory palace?

For grades 6 to 8, familiar scenes link each line to a place along 38 pauris. Sikh-inspired journeys invite recall and reflection. The ustaad guides pronunciation; rewards follow learning, not screen time.

Tools and implementation

React Native / Expo · TypeScript · IndicConformer · BaniDB · reference audio. Built with Codex and Paper. MIT-licensed project code.

Private processing, by design

Recordings are processed privately in Azure. Temporary server recordings are deleted after scoring, with no use for public-model training.

Khalis Foundation can host the model in its own shared AWS or Azure environment. On-device packaging is another option for fully local processing that keeps recordings on device.
